Re: Series B Term Sheet - Proposed Investment of \$45 Million

Dear Ms. Thornton,

Following our productive meetings over the past several weeks and the completion of our preliminary due diligence, I am pleased to present this letter of intent outlining the proposed terms for Greenfield Ventures Capital's lead investment in NeuralPath Diagnostics' Series B financing round.

We have been deeply impressed by NeuralPath's progress since your Series A round in 2023. Your AI-powered diagnostic platform has demonstrated remarkable clinical validation results, achieving 97.3% sensitivity and 94.8% specificity in detecting early-stage pancreatic cancer from routine blood panels - significantly outperforming current screening methods. The FDA Breakthrough Device Designation received in November 2024 further validates the transformative potential of your technology.

Proposed Terms:

Investment Amount: \$45,000,000 (Forty-Five Million US Dollars)

Lead Investor: Greenfield Ventures Capital (\$30M)

Co-Investors: HealthTech Partners (\$10M), BioFrontier Fund (\$5M)

Pre-Money Valuation: \$180,000,000

Post-Money Valuation: \$225,000,000

Security: Series B Preferred Stock

Liquidation Preference: 1x non-participating

Board Seat: One seat for Greenfield Ventures (proposed: Jonathan Park, Partner)

Pro-Rata Rights: Standard pro-rata rights for all Series B investors

Anti-Dilution: Broad-based weighted average

Use of Proceeds: We understand the funding will be allocated approximately as follows: 40% for Phase III clinical trials (\$18M), 25% for regulatory affairs and FDA submission preparation (\$11.25M), 20% for commercial team build-out (\$9M), and 15% for continued R&D and platform expansion (\$6.75M).

We believe NeuralPath is exceptionally well-positioned to transform early cancer detection. The combination of your proprietary biomarker panel, advanced machine learning models, and the growing body of clinical evidence creates a compelling value proposition for both patients and healthcare systems. With pancreatic cancer's current 5-year survival rate of just 12%, a reliable early detection tool represents a significant unmet medical need.

This letter is non-binding and subject to completion of customary due diligence, definitive documentation, and approval by Greenfield Ventures' Investment Committee. We anticipate completing due diligence within 45 days and would aim to close the round by end of Q2 2025.

We are genuinely excited about the opportunity to partner with you and the NeuralPath team on this journey. Please do not hesitate to reach out with any questions.

Warm regards,

Jonathan Park
